

Executive Summary

HAH Acquisition - A Step Towards Value Chain Completion

Acquirer
Background

GMD is operating well, but not to its fullest potential in the growing but volatile market of maritime/port industry

Question
to Answer

Between Hai An & Transimex, what is the optimal choice for GMD to acquire with its current situation and capacity?

Suggestion

GMD will buy HAH with 12,86% premium per share for its potential performance, buying 51% of HAH (5912 billion VND)

Key Rationales

Value Chain Alignment & Completion

Market Opportunities & Reduced Competition

Valuation

Intrinsic value per Share

62.634,57 đ (Valuation of EV: 11,847,395,998,002)

Synergy
Value

Value of Synergies to Acquirer:

5974 billion VND after M&I Costs

Industry Analysis: Opportunities & Challenges

First, we conducted analysis about the macro markets and found out that

Vietnam's Port & Maritime Shipping industry is growing back....

(Source: NSO)

23% 
in Q1/2026 total
import/export turnover.
**Proving industry
demands**

...with several potential market trends.

Governal investment in deep ports

Can Gio Port
Cai Mep Ha Port
Do Son Port

(Source: CafeF)

#10
globally

Vietnam is highly ranked
among “Emerging Market
Logistics” indicator
(Appendix: EMLI by Guotai Junan)

Proving Vietnam's position in the Global Port & Maritime Shipping Market

However, the market is also facing challenges when...

Table: Comparative Prices of Loading/Unloading services

Region	20ft Price	40ft Price
Việt Nam (Deep port)	~50	~80
Campuchia	~60	~110
Thái Lan	~60	~120
Singapore	~110	~190
Hong Kong (Trung Quốc)	~110	~200
Indonesia	~80	~150
Philippines	~80	~170

average services prices
are **comparatively lower**
than others in the areas

within medium terms,
prices are predicted to
stay **stagnant** or **decrease**
(Appendix: Industry Analysis)

(Source: Guotai Junan Report)

Socio-economic & political environments
are changing unpredictably, leading to increasing costs in
ocean freight.

Significantly add cost to the operation of GMD
when serving international partners

(Source: FiinRatings)

Key Takeaway

The Vietnam Port/Maritime Shipping Industry is poised with several opportunities despite tax/tariff & price-based challenges.

Company overview: Gemadept (GMD)

Within the macro context, we analyzed GMD’s business performance and identify what it faces currently.

GMD is growing despite difficulties within the period...

(Source: GMD, team analysis)

23% YoY
revenue growth

16% YoY
profit growth

... which is primarily driven by its excellent business models and high capacity.

- Port operations:**
- 6 ports nationwide
 - Key asset: Gemalink
 - Capacity: 3.5M TEUs | 2M tons bulk

- Logistics:**
- Air cargo, DCs, barges (45 units)
 - End-to-end supply chain services

(Appendix: GMD's total port throughput (2025))

Putting this into the macro context, we can see the opportunities and challenges that GMD is positioned to have.

Opportunities

Integrated ecosystem: Combination of deep-sea ports, ICDs, and a fleet of 45 barges optimizes the supply chain.

Strategic partnerships: Collaboration with major shipping lines such as CMA CGM (world’s 3rd largest carrier) ensures cargo volumes for Gemalink.

Prime locations: Ports like Nam Dinh Vu benefit from first-mover advantage on the Cam River.

Challenges

Competitive pressure: Increasing competition in Hai Phong from Lach Huyen deep-sea ports due to vessel upscaling trends.

Revenue sensitivity: Dependence on fixed-term vessel charter contracts; logistics revenue is vulnerable when freight rates decline.

Target Overview - HAH vs. TMS

To make the recommendation for the M&A decision, we dive deep into the operations of TMS & HAH.

	Hai An (HAH)		Transimex (TMS)																																															
Service			Logistics																																															
			as 3rd party, focusing on inland delivery																																															
Operating Model			Operate mainly in domestic & Vietnam - nearby areas																																															
			Truck & delivery based

Strategic Rationales Summaries

We chose HAH as the target for this M&A on two key foundations.

HAH as the target for the M&A			
Strategic Foundation #1		Strategic Foundation #2	
Value Chain Alignment & Completion		Market Opportunities & Reduced Competition	
GMD	Focus mostly on load/offload services	Operates mostly in deep water ports, showing strong feasibility for global market expansion	
HAH	Strong infrastructures for vessels segments	7 routes within Asia, mostly feeders among the route	

Strategic Rationale I: Operational Alignment

Looking at the business model of HAH, we found the first rationale for this M&A

GMD does not currently control cargo movement... ..which can be completed by acquiring HAH.

This M&A can solve a risk that GMD currently faces.

~1.75m TEU

of current throughput gap and upcoming capacity expansions can create **structural utilization risk**

(Appendix: GML P2 Overview, NDV Utilization Analysis)

HAH provides **a captive, recurring volume base** through its existing domestic & intra-Asia routes already calling at GMD ports.

- Absorb current unused capacity at NDV and improve utilization
- Provide immediate volume base for Gemalink ramp-up
- Stabilize throughput and reduces third-party dependency

Key Takeaway

Acquiring HAH transforms GMD into an integrated platform that captures margin, secures volume and controls the logistics value chain

Strategic Rationale II: Opportunity Utilization & Reduced Competition

Additionally, looking at the market scenarios globally and locally, we see needs to fulfill this M&A

Intra-far East is the most potential region with significant growth...

1st Intra Asia ranked about the capacity that a route can cover globally, posing a potential for business growth.
(Appendix: Capacity of Route)

This is a result from strategy **“China plus one”** of MNCs, a manufacturing shift from China to other regional contries beyond **USA – China Trade Conflict**.

Consequently, it shows a rising demand for feeder fleets with available Intra-Far East routes to transport goods and manufacturing materials

Gemadept’s cargo throughput is under pressure...

4th GMD ranked in market share of Hai Phong Port – a key & potential area for GMD.
(Appendix: Market Shares in HP Ports)

...due to intensifying competition in the Hai Phong port area.

VSC has high control power on HAH with **21,24%** of its shares, allowing VSC to operate more effectively

Nam Dinh Vu Port needs time to attract customers, while other ports are expanding significantly, especially in deep ports with high capacity.

Fail to acquire HAH will result in GMD losing just market share, and its ability to dictate the flow of cargo to its own terminals.

HAH’s operation model can help to grow GMD as a “well-rounded” business & reinforce its national position in this competition.

High Shipping Capacity

19 feeder ships with carrying capacity over 29,000 TEU

Routes within leading countries

Shipping routes of HAH goes through China and Singapore, with several key partners, with 1 domestic & 4 international routes.
(Appendix: HAH’s shipment routes)

Key Takeaway

HAH can further enhance the business performance of GMD thus reducing the risks of being competed by others.

Revenue Synergies

After M&A, we calculate the synergies within the revenue due to the market expansion opportunities offered by HAH's business

After acquisition, we expect the GMD performance by segments to grow as under, due to several background assumptions.

Revenue Increase

As GMD has high cargo volumes, it will help to fill vessel slots of HAH using the acquirer's existing cargo volume (backloading), thus enhancing the operating efficiency of HAH's vessels.

As more HAH's fleets & ships serving Intra-Asia routes, they will go through GMD's ports instead of competitors', this will help to improve the port's overall throughput.

Cost of Syn

The acquirer is projected to enter a phase of aggressive, long-term revenue synergy expansion, where the costs associated with capturing new market share and cross-selling are expected to grow by 213% over the five-year forecast period.

(Appendix: Revenue Synergy Projection)

Cost Synergies

Also, we expect costs to be deducted due to the operational alignment.

We expect this M&A to cut down on fuel cost & external rentals based on these assumptions:

The GMD x HAH integration will drive a reduction in fuel costs due to the following factors **(1) Bulk procurement:** High-volume fuel purchasing enables the entity to benefit from significant trade discounts; **(2) Improved capacity utilization:** Unit fuel costs will decrease as the integrated value chain maximizes vessel fill rates (load factors).

This also leads to reduction in external chartering costs as GMD focuses on the Intra-Asia waterway transport market, achieved by leveraging HAH's existing fleet.

We also estimated the realization of such costs as under

We assume that fuel costs cannot be reduced immediately due to existing long-term commercial oil procurement contracts. However, as GMD operates Intra-Asia routes, it can proactively leverage HAH's vessels, enabling a rapid reduction in external chartering costs.

Consequently, we assume a realized cost savings rate of 33% in 2026, with the expectation of reaching 100% by 2029.

Synergy Value to Acquirer

Altogether, we estimated this acquisition to be significantly profitable for GMD.

After deducting merger & integration cost, wer arrived at the present value of synergy through DCF model and quantified its benefits.

Present Value of Synergies:	7.037.937.621.541,80	Value of Synergies to Acquirer:	5.974.453.251.875,20
--	----------------------	--	----------------------

HAH Valuation

We use the FCFF method for HAH Valuation.

First, we make assumptions to arrive at the cost of capital at...

Price per share (04/05/26)	55.500,00 đ
Market value of equity	9.803.520.000.000,00
Market value of debt	1.804.882.415.153,00
Total market value of firm = E+D	11.608.402.415.153,00
Cost of equity	13,16%
Cost of debt	8%
Effective tax rate	18,72%

WACC	12,15%
-------------	--------

... which allows us to arrive at the FCFF after the projection

Terminal value (2030)	20.882.124.466.962,60
PV of Terminal value	11.770.413.890.811,20
ENTERPRISE VALUE	12.730.377.978.498,00
EQUITY VALUE	11.063.771.220.474,00
No. of shares outstanding	176640000
Intrinsic value per Share	62.634,57 đ

Premium Paid

12,85%

GMD After M&A Value

After acquiring HAH, we expect GMD's enterprise value to increase.

After acquiring, we expect the EPS & Share prices to increase annually

		Projected – Combined Period:				
		2026	2027	2028	2029	2030
Acquirer – Standalone EPS:	\$ / Share	3.693,95	3.718,56	4.077,31	4.308,77	4.544,52
Earnings Per Share (EPS):	\$ / Share	6.266,58	6.583,92	7.262,21	7.798,40	8.360,63
Accretion / (Dilution) – \$:	\$ / Share	2.572,63	2.865,35	3.184,90	3.489,64	3.816,12
Accretion / (Dilution) – %:	%	69,64%	77,06%	78,11%	80,99%	83,97%

Deal Structure

Considering the financial background of GMD, we recommend the sources of fund we use as under.

Risk Assessment

Their are three main risks relevant to market and operational risks

[R1] Market risk | Industry overcapacity

Global vessel supply is growing much faster than demand, pressuring freight rates and shipping profitability.

The container shipping market is entering a supply-driven downcycle...

...while freight rates are already normalizing

~10M TEU

(~1/3 of global active fleet)
of new containership capacity
currently on order

7–9%

projected global fleet
growth in 2024–2025
vs only

3–4%

global container
trade growth

(Source: Clarksons Research)

–45% YoY

decline in East–West long-haul
freight rates in 2025 despite
continued Red Sea rerouting support

(Source: Freightos)

Excess vessel supply may pressure:

Freight rates

Vessel utilization

Shipping EBITDA margins

Weakening synergy realization, cash flow generation and post-deal deleveraging capacity

Despite overcapacity concerns, carriers have demonstrated increasing ability to manage supply through **blank sailings, slow steaming, service suspensions and long-term service contracts**

GMD’s port ecosystem may provide more stable captive throughput and reducing exposure to spot-market volatility

Impact: HIGH

Container shipping remains highly operationally leveraged, causing freight-rate declines to disproportionately impact EBITDA.

Possibility: MEDIUM–HIGH

Most vessel deliveries are already contracted, while current freight-rate support remains partially disruption-driven.

[R2] Market risk | Import-Export Supply and Demand Fluctuations

Geopolitical tensions and trade tariffs trigger demand shocks, destabilizing global trade volumes and port throughput

U.S.–China Trade War 2.0 threatens globally supply chain

Rev Threat: Global container throughput projected to contract

~60%

Goods are from China

10% – 20%

baseline tariff on all other US imports, dampening global consumption.

(source: GSO)

Characterized by aggressive trade decoupling and the weaponization of economic policy, forcing a reconfiguration of trans-pacific trade lanes.

3%–5%

Volume Contraction

10%–15%

Revenue Volatility

(source: GSO)

Due to high operating leverage in port & shipping, a 1% drop in trade volume (demand) amplifies impact, causing a ~1.2% revenue decline but **a steep ~5.5% net profit (ebit) loss.** fixed costs magnify the effect.

Possibility: HIGH ---> High operating leverage amplifies small trade volume fluctuations into significant earnings volatility, directly threatening the deal's cash flow stability.

Mitigants

Expand HAH’s Intra–Asia routes to offset volume contractions in Transpacific and Asia–Europe lanes

[R3] Operational risk | Operational Cost Instability

Finally, post M&A operations are threatened with high costs due to fuel prices instability

35–40%
of total operating costs come from fuel expenses
(Appendix: Operating cost breakdown by nature)

Some possible drivers:
OPEC+ supply cuts & Middle East tensions

Consequently, higher fuel prices increase cost per TEU and compress operator margins.

BAF Mechanism	Operational Efficiency	Hedging Strategies
[1] BAF mechanism: HAH applies a BAF to its freight contracts, allowing it to recover approximately 70–80% of fuel cost increases from customers.	[2] Operational efficiency: GMD can optimize HAH's vessel routes to minimize empty container and reduce fuel consumption per route.	[3] Utilizing fuel hedging instruments (forwards/swaps) for 20–30% of annual consumption to stabilize price.
